It is known that the use of ICTs (Information and Communication Technologies) in Healthcare Services is the main mechanism to improve efficiency and effectiveness, as a result this conference aimed to gather information systems practitioners and management experts from all fields involved in developing computer technology to develop and improve the area of healthcare quality. The submissions were accepted under the following 3 main areas in the field of e-health: Research Issues, Management Issues and Applications.

The e-Health 2010 conference received 110 submissions from more than 25 countries. Each submission was anonymously reviewed by an average of four independent reviewers, to ensure that accepted submissions were of a high standard. Consequently only 22 full papers were approved which meant an acceptance rate of 20%. A few more papers were accepted as short papers, reflection papers posters and doctoral consortium.

Extended versions of the best papers were selected to be published in:

- the IADIS International Journal on WWW/Internet (IJWI). ISSN: 1645-7641
In addition to the presentation of full, short and reflection papers, posters and a doctoral consortium that divided the conference program in 9 parallel sessions, this event also included one keynote presentation by Dr. Paul A Amos BSc, MB BS, Information Standards Board for Health and Social Care in England, UK.
