The International Conference on e-Health 2011 was the 3rd edition of this conference’s series (part of the IADIS Multi Conference on Computer Science and Information Systems) was hosted in Rome, Italy, 20-22 July, 2011.

This conference was organized by the International Association for Development of the Information Society (IADIS).

This conference focuses on the notion that the use of ICTs (Information and Communication Technologies) in Healthcare Services is the main mechanism to improve efficiency and effectiveness. Therefore, the e-Health 2015 conference aimed to draw together information systems, practitioners and management experts from all quadrants involved in developing computer technology to improve healthcare quality. Submissions were accepted under the following 3 main areas in the field of e-health: Research Issues, Management Issues and Applications.

The 2011 edition received 103 submissions from more than 29 countries. Each submission was blindly evaluated by an average of four independent reviewers, to ensure that accepted submissions were of a high standard. Consequently only 19 full papers were approved which meant an acceptance rate of 19%. A few more papers were accepted as short papers, reflection papers and posters.

Extended versions of the best papers were selected to be published in:

- the IADIS International Journal on WWW/Internet (IJWI). ISSN: 1645-7641

The Conference included the presentation of full papers, short papers, reflection papers, posters and also one keynote presentation by Dr. Roberto Ascione, Publicis Healthcare Communications Group Company, Italy.
